## Summary

Full-stack developer with 1+ year of experience building React/TypeScript web applications, including ERP and logistics platforms. Strong focus on UI/UX design and translating business requirements into functional, user-centric interfaces. Passionate about applying AI—especially machine learning and generative tools—to enhance modern web development.

## Work Experience

**Software Developer (Frontend)** - Tomie Technologies **Sep 2024 - Present**

- Designed and structured initial frontend architecture of an ERP system, establishing design theme, reusable UI components, scalable layout patterns, navigation flows, and overall project structure.
- Translated business requirements into user journeys, mockups, and wireframes using Figma, facilitating clearer communication between stakeholders and developers.
- Developed and integrated backend REST APIs to support core frontend features.
- Produced marketing visuals and digital graphics using Figma.
- Collaborated cross-functionally within agile teams, participating in sprint planning, reviews, and retrospectives.

**Full Stack Web Developer** - Freelance **Dec 2023 - Feb 2024**

- Developed “Kimchinc”, a medical logistics coordination platform with role-based access and dynamic job tracking, resulting in a ~30% improvement in client workflow efficiency.
- Built secure login flows and tailored dashboards for Admin and Driver roles using the MERN stack.

**Design & Technology Technician** - Dulwich College Singapore **Aug 2019 - Jun 2024**

- Coordinated curriculum resources, conducted safety assessments, and managed technical equipment for 200+ students, ensuring smooth delivery of educational programs.

## Education

**Bachelor of Computer Science** – University of Wollongong **2021 - 2024**

**Diploma in Product Design & Innovation** - Ngee Ann Polytechnic **2014 - 2017**

## Skills

Frontend	React, TypeScript, Tailwind CSS, Redux, Axios, Vite, Shadcn, Expo
Backend	Node.js, Express, REST APIs, PostgreSQL, MongoDB
Testing/Tooling	Cypress, ESLint, Prettier, Git, Postman
Programming Languages	JavaScript, TypeScript, Python
DevOps & Hosting	Netlify, Render, AWS, Supabase
Design	Figma, Adobe Illustrator, Adobe XD
Project Management	GitHub, Jira, Confluence, Notion, Agile
AI Tools	ChatGPT, Claude, Prompt Engineering, Image Generation

## Personal Projects

### Miranda Store System

React-based POS system for a local grocer, featuring inventory management, analytics dashboards, and role-based authentication. Developed using React, TypeScript, Tailwind, ShadCN, Node.js, Express, PostgreSQL, Supabase.

### Budget Master

Finance app with budgeting, wallet tracking, and user authentication. Developed using the MERN stack, with end-to-end test coverage via Cypress.

### Kimchinc

Medical logistics cross-platform web app for managing and tracking medical job deliveries. Resulted in a ~30% improvement in client workflow efficiency. Developed using the MERN stack.
