Full Stack Software Developer • Phone: +65-9232-2754 • Email: austin.nathan.miranda@gmail.com • LinkedIn: [linkedin.com/in/austin-miranda](https://www.linkedin.com/in/austin-miranda) • Github: github.com/TarokoDev • Projects: austinmiranda.netlify.app

PROFILE

Full Stack Software Developer with 2 years of experience delivering web platforms end-to-end across frontend, backend, and deployment. Has shipped production applications (internal and client-facing) in fast-moving startup environments, collaborating across product, QA, and engineering to meet delivery milestones. Now looking to bring that delivery experience into a structured team environment — with a focus on deepening engineering fundamentals, delivery quality, and collaborative practice.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, HTML, CSS, SQL
Frontend	React, Vite, Redux, Tailwind CSS, Next.js, Material UI, ShadCN/UI, daisyUI, Cypress, React Testing Library
Backend & Database	Node.js, Express, FastAPI, PostgreSQL, SQL Server Management Studio, MongoDB, Supabase, Directus
Dev Tools	Git, Docker, Postman, GitLab, Github, Azure DevOps, Jira, Grafana
Cloud	Netlify, Render
Design & AI Tools	Figma, Adobe Illustrator, Cursor, Claude Code, ChatGPT, Gemini

WORK EXPERIENCE

Full Stack Software Developer • Enaiblex Pte. Ltd. (formerly Graphene Services Pte. Ltd) • Full-Time Jul 2025 – Jun 2026

- Delivered two full-stack internal platforms — a creative asset review tool and an AI-powered ideation platform — owning frontend planning, API development against an existing schema, and adapting to shifting requirements through QA sign-off and stakeholder demos.
- Integrated third-party image generation APIs built by an in-house ML team — consuming endpoints, implementing webhooks, and collaborating directly on debugging and API contracts; coordinated across QA and AI teams as the primary point of contact for delivery alignment.
- Applied frontend performance techniques including lazy loading and asset optimization to improve load times; wrote frontend tests using Cypress and React Testing Library to support QA sign-off on key user flows.
- Participated in deployment workflows using Docker — running builds to staging and production environments as part of QA and release coordination.
- Onboarded incoming developers to project business logic — producing sequence diagrams and walkthroughs to support parallel delivery on shared codebases.
- Incorporated AI-assisted tools including Cursor and Claude Code into daily workflow for code generation, debugging, and research.

Stack: React, TypeScript, Vite, Next.js, Tailwind CSS, MUI, Redux, FastAPI, Python, SSMS, PostgreSQL, Docker, GitLab, Azure DevOps

Frontend Software Developer • Tomie Technologies Pte. Ltd. • Full-Time Sep 2024 – Jun 2025

- Founding frontend developer on a modular ERP system, architecting the frontend from scratch — scalable layouts, shared component library, design system, and navigation flows across 4 modules including HR and Finance.
- Proposed and led migration from vanilla CSS to Tailwind CSS early in the project — accelerating component delivery and establishing a consistent design system across all modules.
- Led UI/UX pre-development — produced Figma prototypes through multiple iterations, aligning CEO, CTO, and the development team before implementation began — significantly reducing development rework.
- Built and integrated RESTful APIs for Claims Management and multi-level Approval Workflows, enabling end-to-end digital processing of core HR and Finance operations.

Stack: React, TypeScript, Tailwind CSS, Redux, Vite, Node.js, Express, PostgreSQL, Figma, AWS, Cloudflare

Full Stack Web Developer • Freelance • Part Time Dec 2023 – Feb 2024

- Independently scoped, built, and shipped a medical logistics platform for a client — coordinating medical supply deliveries across Singapore hospitals for admin and driver teams, cutting coordination time by ~80% versus their previous manual and WhatsApp-based process.

Stack: React, Tailwind CSS, Node.js, Express, MongoDB, Netlify, Render

Design & Technology Technician • Dulwich College Singapore • Full-Time Aug 2019 – Jun 2024

- Supported 200+ students and teachers across design and technology programmes; automated finance and procurement paperwork with Python scripts and Axiom.ai, saving 70–80% of preparation time across tasks previously taking 1–2 hours each, performed at least 3 times weekly.

Stack: Python, Axiom.ai

EDUCATION

Bachelor of Computer Science, Major in Digital Systems & Security • Part-Time

2021 – 2024

University of Wollongong / Singapore Institute of Management

Diploma in Product Design & Innovation • Full-Time

2014 – 2017

Ngee Ann Polytechnic
