PROFILE

Developer with 2 years of startup experience designing, building, and deploying end-to-end web platforms both independently and collaboratively. Experienced in full-lifecycle delivery and AI-assisted workflows. Always curious to explore new tools and technologies. Now looking to bring that delivery experience into a structured team environment - with a focus on deepening engineering fundamentals, delivery quality, and collaborative practice.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, HTML, CSS, SQL
Frontend	React, Vite, Redux, Tailwind CSS, Next.js, Material UI, ShadCN/UI, daisyUI, Cypress, React Testing Library
Backend & Database	Node.js, Express, FastAPI, PostgreSQL, SQL Server Management Studio, MongoDB, Supabase
Dev Tools	Git, Docker, Postman, GitLab, Github, Azure DevOps, Jira, Grafana
Cloud	Netlify, Render, Vercel, Amazon S3
Design & AI Tools	Figma, Adobe Illustrator, Cursor, Claude Code, ChatGPT, Gemini

WORK EXPERIENCE

Full Stack Software Developer • Enaiblex Pte. Ltd. (formerly Graphene Services Pte. Ltd) • Full-Time Jul 2025 – Jun 2026

- Led and developed two full-stack internal platforms - a creative asset review tool and an AI-powered ideation platform. Owned frontend planning, API development against an existing schema, and adapting to shifting requirements through QA sign-off and stakeholder demos.
- Integrated custom image generation APIs built by an in-house ML team, implementing webhooks and resolving contract mismatches directly with the AI/ML team as delivery moved from prototype to production.
- Improved UI responsiveness for image-heavy review features, implemented concurrency controls in multi-user apps, and authored Cypress and React Testing Library suites to ensure seamless QA sign-off.
- Ran Docker-based deployment workflows to staging and production, coordinating release timing with QA and stakeholders.
- Authored sequence diagrams and onboarding walkthroughs that became the standard reference for new developers joining the codebase, cutting the ramp-up conversations needed before someone could ship independently.
- Used Cursor and Claude Code daily for planning, feature-work, debugging, and research - reviewing and adjusting AI output before merging to maintain architectural consistency.

Stack: React, TypeScript, Vite, Next.js, Tailwind CSS, MUI, Redux, FastAPI, Python, SSMS, PostgreSQL, Docker, GitLab, Azure DevOps

Frontend Software Developer • Tomie Technologies Pte. Ltd. • Full-Time Sep 2024 – Jun 2025

- Founding frontend developer on a modular ERP system, architecting the frontend from scratch (scalable layouts, shared component library, design system, and navigation flows across 4 modules including HR and Finance).
- Proposed and led migration from vanilla CSS to Tailwind CSS early in the project, accelerating component delivery and establishing a consistent design system across all modules.
- Led UI/UX pre-development, producing Figma prototypes through multiple iterations to align CEO, CTO, and the development team before implementation began, reducing rework from late-stage design changes.
- Designed and built the logic for multi-level Approval Workflows and Claims Management, handling role-based routing, conditional approval states, and RESTful APIs.

Stack: React, TypeScript, Tailwind CSS, Redux, Vite, Node.js, Express, PostgreSQL, Figma, AWS, Cloudflare

Full Stack Web Developer • Freelance • Part Time Dec 2023 – Feb 2024

- Independently scoped, built, and shipped a medical logistics platform for a client which enables faster coordination between admin and drivers with medical supply deliveries across Singapore hospitals, cutting coordination time by ~80% versus their previous manual and WhatsApp-based process.

Stack: React, Tailwind CSS, Node.js, Express, MongoDB, Netlify, Render

Design & Technology Technician • Dulwich College Singapore • Full-Time Aug 2019 – Jun 2024

- Supported 200+ students and teachers across design and technology programmes; automated finance and procurement paperwork with Python scripts and Axiom.ai, saving 70–80% of preparation time across tasks previously taking 1–2 hours each, performed at least 3 times weekly.

Stack: Python, [Axiom.ai](https://axiom.ai), Fusion 360, Adobe Illustrator, 3D-Printing, Laser/CNC/Water-jet printing

EDUCATION

Bachelor of Computer Science, Major in Digital Systems & Security • Part-Time 2021 – 2024

University of Wollongong / Singapore Institute of Management

Diploma in Product Design & Innovation • Full-Time 2014 – 2017

Ngee Ann Polytechnic

PROJECTS

Created an online portfolio from scratch that showcases projects spanning full-stack web development and systems-level learning. View at: <https://austimiranda.netlify.app>.
